## LUX LUNAR ROAD STUDS

Lux Lunar road studs are a good solution for both safe and sustainable infrastructures, providing superior distance visibility of the road layout ahead.

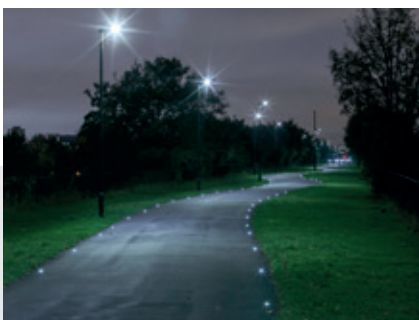

LUX Lunar road studs activate at the beginning of twilight. Once daylight will exceed 100 lux in the morning, the lightning will turn off and the battery starts charging. They maintain light outputs throughout a full annual cycle.

Application of LUX Lunar road studs are proven to increase night time road safety and allows additional reaction time to respond to road layouts. Street lightning may not be necessary and no maintenance is required.

For more information or to discuss the different possibilities for cooperation, please contact us without obligation.

### TOEPASSINGEN

- Traffic calming measures
- Cycle lanes
- Emphasizing roads and dangerous curves
- Quays and piers
- Recreational and pedestrian areas
- Decoration of public squares
- Roundabouts
- Urban area boundaries
