

LUX SOLID GLASS ROAD STUDS

COST EFFECTIVE AND SAFE TOLL ROADS

- ✓ Maintenance-free
- ✓ Strongest road studs available on the market
- ✓ Delivery and installation worldwide
- ✓ Alternative to lampposts
- ✓ Resistant to snowploughs
- ✓ Maximum traffic safety

LUX 4

Ø 100mm

LUX 5

Ø 50mm

LUX solid glass road studs are an economical choice for a safe and maintenance-free road. They are made of tempered safety glass with a compressive strength of 80 tons. The road studs will be installed within the road surface, which ensures that the road stud will outlive the road itself. In comparison, synthetic road studs are glued on top of the road surface; they come off easily and are short-lived products. LUX solid glass road studs can replace energy-guzzling lampposts, resulting in a major decrease of energy costs and CO2 emissions. They are resistant to snowploughs and can be driven over all the time. Applicable for use in both asphalt and concrete roads. Comply with CE certificate NEN 1463-1 and 2.

Van Wylick is a family-owned company specialising in the application of solid glass road studs since 1993, supplying the strongest road studs available on the market.
